

## Migrate a SiteScape Site to a SharePoint Site

Our SiteScape2SharePoint Migrator 1.0 can automatically migrate your SiteScape site to WSS 3.0 or MOSS 2007. Your data do not have to be transferred manually, saving you a significant amount of time and money.

### Procedure

1. IOZ plans the migration with you and determines the basic conditions.
2. The SiteScape-Migrationscrawler is adapted and tested according to the basic conditions and the SiteScape version.
3. IOZ creates the SharePoint platform and defines templates for the various workspaces of your SiteScape site.
4. The SiteScape-Migrationscrawler automatically migrates your SiteScape site's documents and metadata to WSS 3.0 or MOSS 2007.
5. IOZ accompanies you throughout the entire process and conducts a final security check.

### Function of the SiteScape Migrationscrawler

First, the Migrationscrawler scans all documents and metadata and stores them locally.

Next, the documents and metadata are migrated from the local storage to the WSS 3.0 or MOSS 2007 SharePoint template. The individual SiteScape site workspaces are automatically stored according to the predefined schema.

### Additional IOZ Services (optional)

- Planning and organizing your SharePoint platform
- Programming of individual solutions
- IMS for continual process improvement
- Hosting your SharePoint platform

### References

We have already migrated SiteScape sites to MOSS 2007 for the following customers:

**Dienststelle Verkehr und Infrastruktur (vif), Luzern**  
Source system: SiteScape Enterprise Forum 7.1.
